

### Check this out - Google PowerMeter

Addison Fox <addison.ps.fox@gmail.com>

Hello all,

Exciting news! Here's another new tool that I wanted to share with you - it's called "The Energy Detective" or TED for short. What's neat about TED is it tells me in real time via a table top display how much electricity my house is using. Can you believe that?!

The other really neat thing about TED is that I don't have to be at home looking at the table top display to see how much electricity my house is using. I can view my TED's electricity use readout by logging onto Google PowerMeter from any computer. Your class has been so helpful to me in figuring out my electricity use I have invited you to view my data using Google PowerMeter. Of course I also have some new questions for you once you look over the data.

- What information does the graph show?
- How do you think this information could be used to reduce electricity use and costs?

I would really like to dig into an investigation of my home electricity use. Could you suggest some questions we could investigate together?

Thanks again for all of your help!  
Addison
